# MapQ™

## Create High Quality Land Maps Quickly and Easily

**Bring together the information required to make informed land decisions with powerful searches and data.**

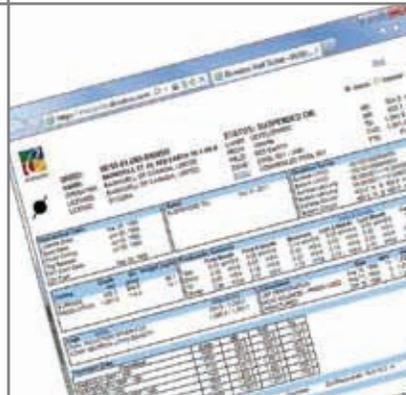

### Quality Base Mapping

**MapQ** enables you to create high quality, informative maps in a fraction of the time typically required with other general mapping packages. **MapQ** is easy to use and easy to update, simplifying workflows and enabling rapid creation of detailed and informative maps.

### Powerful and Easy to Use

**MapQ** provides you with powerful search and display options to create war room sized maps that help highlight pertinent information. Create and execute complex land searches in both public and proprietary land sets and view multi-zonal land parcels in a format that is easy to understand. Map element properties are controlled so that displays are consistent and readable.

### Combines Data for Land Decisions

**MapQ** leverages public data and the query capabilities of proprietary land systems to produce effective maps. Combine all the data needed to make land decisions in an open system, enabling clients to use their preferred data vendor for public data and utilize proprietary land and seismic data within the data selection and map display.

# MapQ™
## Create High Quality Land Maps Quickly and Easily

**MapQ** is a batch basemapping application that enables you to produce high quality industry maps with a few clicks of the mouse.

**MapQ** quickly generates detailed views of land data - with no training required.

**MapQ** is easy to use and easy to update, simplifying workflows and enabling rapid creation of detailed and informative maps.
