Crude Oil Pipeline Management System

Our Crude Oil Pipeline Management System is an internet-based service that can be accessed from anywhere - office, home and on the road.

Overview

Our Crude Oil Pipeline System provides the operators of crude oil pipelines with a straightforward, cost-effective system for managing key pipeline processes and activities.

Processes & Activities
'COPS' manages Nominations, Confirmations & Scheduling without requiring emails, spreadsheets or faxes. The system includes Shipper Management and monthly and daily measurement. Manage Inventories, invoices and deductions - such as build/pull balances and adjustments.

Efficiency, Simplicity & Visibility
Our Crude Oil Pipeline System streamlines daily administration eliminating clumsy manual communication. Shippers can nominate, confirm, view terms & invoices in an easy-to-navigate web site. Pipeline data is available easily, with robust reporting and download options.

Reliable and Secure
We provide 24x7 customer support with secure access. Our system features selectable user roles and robust passwords. We also include language flexibility - allowing users to select between English and Spanish.

QuickNom

For operators of gathering, midstream and interstate natural gas pipelines, QuickNom® Pipeline Management is a cost-effective system for managing daily processes and activities. Features include Nomination and Confirmation scheduling, Measured Volumes, Operational Balancing Agreements, Shipper Imbalances, Contracting Rates, reports and Invoicing.

NGI

The Natural Gas Storage Management System is an inventory management system that provides all the key information needed to manage storage facilities and hubs. Automated processes result in administrative efficiencies and increased customer satisfaction. Features include Storage Nominations and Confirmations, Scheduling Customer Inventories, Parks, Loans, Wheeling and Other Storage Services.

QuickTariff

QuickTariff acts as a "packager" for eTariff filings, bundling together user-supplied Tariff revisions with stored Tariff parameters. Quick Tariff maintains all FERC-required Tariff "meta data" and uses filing wizards so that creating an eTariff filing is quick and complete. All filing elements are validated and combined into an XML file for simple eTariff submission.

COPS

Crude Oil Pipeline System (COPS) provides the operators of crude oil pipelines with a straightforward, cost-effective system for managing key pipeline processes and activities. Features include Nominations, Confirmations, Scheduling, Shipper Management, Measurement, Inventories, Invoicing & Deductions.

PAS

Pipeline Automation Service (PAS) is a service which can be broadened or narrowed to match transaction volumes, budgets, & system interfaces. The service delivers reliable communications while ESG manages all aspects of message security. Features include Customer Inventories, Parks, Loans and Wheeling services.
