

QuickNom Interstate Natural Gas Pipeline Management

Our QuickNom® Interstate is an internet-based service, so it can be accessed using any browser from anywhere - such as the office, home, or on the road.

Overview

Our QuickNom® Interstate Natural Gas Pipeline Management System provides FERC regulated natural gas pipelines with a cost-effective, NAESB and FERC compliant system for managing pipeline nominations, scheduling, capacity release and more.

Compliance, Security and Simplicity

QuickNom® is compliant with the latest NAESB and FERC standards, employing industry-standard security with robust role and password management. Shippers nominate, retrieve scheduled quantities, and view contracts - all in one easy-to-navigate web site. We also provide 24x7 customer support.

Processes Needed to Manage Pipelines

We handle all the processes needed to manage a natural gas pipeline, including nominations, confirmations, scheduling, actuals, OBAs, shipper imbalances, contracting, capacity release, invoicing and FT and IT rate schedules.

Informational Postings Site Service

We also provide an Informational Postings Site Service that supports all FERC-mandated public postings. When coupled with QuickNom® many daily and routine postings are automatically posted to the Informational Postings Site, saving the pipeline operator valuable time and compliance headaches.

QuickNom

For operators of gathering, midstream and interstate natural gas pipelines, QuickNom® Pipeline Management is a cost-effective system for managing daily processes and activities. Features include Nomination and Confirmation scheduling, Measured Volumes, Operational Balancing Agreements, Shipper Imbalances, Contracting Rates, reports and Invoicing.

NGI

The Natural Gas Storage Management System is an inventory management system that provides all the key information needed to manage storage facilities and hubs. Automated processes result in administrative efficiencies and increased customer satisfaction. Features include Storage Nominations and Confirmations, Scheduling Customer Inventories, Parks, Loans, Wheeling and Other Storage Services.

QuickTariff

QuickTariff acts as a “packager” for eTariff filings, bundling together user-supplied Tariff revisions with stored Tariff parameters. Quick Tariff maintains all FERC-required Tariff “meta data” and uses filing wizards so that creating an eTariff filing is quick and complete. All filing elements are validated and combined into an XML file for simple eTariff submission.

COPS

Crude Oil Pipeline System (COPS) provides the operators of crude oil pipelines with a straightforward, cost-effective system for managing key pipeline processes and activities. Features include Nominations, Confirmations, Scheduling, Shipper Management, Measurement, Inventories, Invoicing & Deductions.

PAS

Pipeline Automation Service (PAS) is a service which can be broadened or narrowed to match transaction volumes, budgets, & system interfaces. The service delivers reliable communications while ESG manages all aspects of message security. Features include Customer Inventories, Parks, Loans and Wheeling services.
