

Manage Your Oil & Gas Financials

Pandell JV is cloud-based software for Canadian energy companies that streamlines joint venture accounting with automated data capture, flexible billing, and real time reporting.

Benefits

Analyze with Real-Time Net Results

Batch reporting limits your ability to know exactly where your financials stand until the end of the month. Pandell JV processes your partner transactions in real time so you have a live view of your net financial and operational data, any day of the month.

Find Data Fast with Flexible Grid Reporting

Companies choose Pandell JV because its unique grid technology enables you to quickly compile, save, and export information tailored to your specific business needs. Drill down to view source data at either the voucher or reconcile levels.

Share Data with Payables, AFE, PA & Land Systems

Pandell JV has pre-built data adapters and InfoLinks™ to easily share data with your other back-office systems. Streamline information between your financial, operations, and land systems and gain tighter controls with auditable history.

Features

Fast Data Entry Tools

- Joint Interest Management
- Real time reporting
- Cash calls
- EFT & cheque writing capability
- T5 Reporting & submission
- User friendly cross-dept. reports
