# Improve Acquisition Management

Pandell Projects is land acquisition software that facilitates workflow and communication for energy companies and land brokers.

Benefits

Collaborate with Land Service Agents in Real-Time
Escape the tedious and time-sensitive task of compiling and sending project file updates via email. Pandell Projects gives energy companies and their land service partners the power to track, communicate, and report project details in real-time, over the web.

Map your Projects to "See" the Status and Fix Errors
View agreement and project data on an interactive map so you can easily spot mistakes and be confident that your information is accurate.

Create Documents & Detailed Reports Faster
Generate standard surface documents with the touch of a button. Auto-generate agreements and notifications for stakeholder communication or export a quick report for analysis.

Submit Requests & Get Consent via Pandell Connect Portal
Projects integrates directly with our consent web portal, Pandell Connect. Submit requests, communicate with stakeholders, and exchange consent documents, all from within Projects.

Features

Manages Every Detail
Track landowner and stakeholder consultation work. Set configurable task notifications to keep contract obligations in check, including rental payments.

Centralized Project Hub
A central data repository holds all file details in one place, giving your in-house and agency-assigned project stakeholders access to live project information, anytime.

Accessible Anywhere
Modern, web-based technology including a new mobile app gives your land team access to project information from their laptop, tablet, or mobile phone, even when they're offline.

GIS Mapping Integration
Customized Esri ArcGIS mapping tools combine with land acquisition project workflow so users can visually analyze project details on digital maps.

Document Generation
Select any project file or segment of land and automatically generate Surface Leases, Right-of-Way Agreements, and Notification Letters.

Dynamic Search-and-Save

A flexible grid search engine displays any combination of project variables tracked in the system and lets you save custom searches for recurring reporting.

Transitions to LandWorks

Once your land rights are acquired, files can be smoothly imported into Pandell LandWorks for ongoing land asset management.

Bar Raising Support

Exceptional, live, help desk services include one-to-one user support with industry experts, group user training, lunch & learn re-caps, video tutorials and more.

Big Picture Gains

Stay on top with advanced web technology, secure data hosting, smooth system integration, and free upgrades.
