

Capture More Roads Revenue

Pandell Roads is cloud-based software used by Canadian surface land managers to automate and generate road use agreements and rental invoices.

Benefits

Uncover Revenue with Unrestricted Back-Billing

If your lets agreements are tucked away in a stack of file boxes somewhere, there's probably years of unbilled revenue hiding away in there too! Roads' invoice generator gets those billings out of the boxes so you can put cash in the bank!

Review Rolled-Up Project & Revenue Data

Roads gives you three powerful ways to analyze live road use data. Review a dashboard of summary charts; create & export saved reports via smart folders; or slice and dice data any way you like with customized grid searches.

Visualize Your Data with Interactive Mapping

Manually compiling project data is time consuming and error prone. Pandell Roads plots agreement and project data on a map so you can easily spot mistakes and be confident that your information is accurate.

Features

Manages Lets & Takes

- Access from any web browser
- Addendum replication
- Attach scanned original documents
- Auto-creates addendum schedules
- Creates one-off letter agreements
- Data field validation
- Defined user roles

Screenshots

The screenshots illustrate the following features:

- Home Dashboard:** Shows navigation options for General, Browse (Companies, Contacts), Lets (Master Agreements, Addendums, Roads, etc.), and Takes (Master Agreements).
- Roads (803) - filtered:** A table listing roads with columns for Name, Type, and Length (k). The table is filtered by status: ACTIVE.
- Status Update:** A form for updating the status of an addendum, including options to bypass updates and set producing status (e.g., Always Trucked).
- Master Agreement 1234:** Details for a specific master agreement, showing a list of addendums with their effective dates.
- Addendum Actions:** A dropdown menu for actions on an addendum, including Approve, Cancel, Reject, and Send For Approval.
